Belimo Display App

Remote display with setpoint functionality

The Belimo Display App distills all measurements into a graphical interface for non-display room sensors to easily view and adjust setpoints. The access protection prevents unauthorized individuals from modifying the air quality in public rooms (e. g., schools). Ensure a healthy indoor environment with Belimo room sensors and the Display App.

BELIMO®

Clear display, intuitive operation

The Belimo Display App is the most innovative and convenient way to access Belimo room sensors and operating units without a display. The app's intuitive display illustrates the current room values enabling setpoints to be adjusted. A four-digit optional access code prevents input from unauthorized individuals. Third parties will not be able to access safe critical data through NFC.

→ How it works:

1. Download the Belimo Room Sensor Display App.

2. Hold the smartphone to the room unit.

3. View and adjust actual values or setpoints.

4. To activate the setpoints, hold the smartphone to the room unit.

It's that simple.

Indoor air quality (CO2 content) is visually accessible.

Controlled access

The Display App can restrict access to a room unit via a four-digit code. As soon as the code is entered, it can be saved on the device, providing convenient, secure access without reentering it.
